SUMMARY

Software engineer graduating Dec 2026 who has shipped real products: a commercial game on Steam (1,000+ sales), a production web app that a tutoring studio (Borough Prep) runs on daily, and an authoritative multiplayer server. Strong in C#, TypeScript, and systems design; comfortable owning a feature end to end from requirements to deploy.

SKILLS

Languages: C#, TypeScript/JavaScript, C++, Rust, Python, SQL

Web & Backend: React, Next.js, Node.js, REST APIs, Prisma, PostgreSQL, MongoDB, Auth.js, Stripe

Tools & Practices: Git/GitHub, GitHub Actions, Vercel, Linux, unit testing, code review, technical documentation

Game Engines: Unity, MonoGame, Unreal (C++), Godot, SpacetimeDB, Steamworks SDK

EXPERIENCE

Founder & Lead Developer | Siphon Games, Brooklyn, NY (remote team)

May 2024 – Present

- Lead engineering on a 2D Metroidvania in Unity/C#: architected player movement, combat, and level-logic systems and built in-editor content-creation tools so non-programmers can author and tune content.
- Set up and run the team's Git workflow, branching conventions, documentation standards, and release schedule for a distributed group of artists, composers, and contractors.
- Maintain Banana Clicker post-launch: shipped 10+ patch releases (v1.0 → v1.1.5) driven by player feedback and Steam analytics.

Game Developer | Siphon Games

Apr 2023 – May 2024

- Designed and shipped Banana Clicker on Steam (released Mar 2023, 1,000+ unique sales): ~23k lines of C# — service-locator core, typed event bus, Addressables-driven data, save system, Steam achievements (github.com/AbsoluteSG/banana-clicker-source).
- Built internal tooling for runtime value tuning, automated progression-curve validation, and regression tests.

Help Desk Assistant | CUNY College of Staten Island, Staten Island, NY

Jul 2022 – Dec 2023

- Front-line technical support for students and staff: diagnosed and resolved hardware, software, network, and account issues; triaged and documented tickets to improve response time and knowledge-base accuracy.

PROJECTS

Borough Prep — Tutor Payroll — Next.js 16, TypeScript, Prisma, PostgreSQL, Auth.js, Stripe Connect [live](#) · [code](#)

- Marketing site + full-stack bookkeeping app for Borough Prep, an independent tutoring studio; replaced their shared spreadsheet and is in production with real tutors and a manager role.
- Role-based auth with invite links, an append-only ledger (rates snapshotted per class so history never rewrites), one-click Stripe Connect payouts, and a live-chat queue with staff presence heartbeat plus a rate-limited AI assistant.

Vrox — server-authoritative multiplayer shooter — C#, Unity, SpacetimeDB [code](#)

- Authoritative server module owns all player and projectile state; clients send intent at 20 Hz and render server truth. Projectiles are written once and positioned analytically (origin + dir·speed·t), so a bullet costs one insert and one delete regardless of flight time.

cmd_zoo — open-world idle sim — Rust, Macroquad, Steamworks [code](#)

- Chunk-streamed world with biome-driven procedural spawns, breeding/hybrid recipe system (100+ species), post-process shaders, save persistence, and optional online visiting over a Steam relay transport; test suite via cargo test.

EDUCATION

B.S. Computer Science | CUNY College of Staten Island

Expected Dec 2026

Coursework: Data Structures & Algorithms, Object-Oriented Programming, Operating Systems, Database Systems, High-Performance Computing, Calculus I–III, Linear Algebra
